

Abstract

**Process for the transesterification of fat and/or oil
by means of alcoholysis**

5

10

This invention relates to a process for obtaining fatty acid esters from triacylglycerides by means of alcoholysis. In particular, the invention relates to a process for the transesterification of fat and/or oil by alcoholysis wherein, in order to accelerate the process, in the initial stage at least one alkanol fatty acid ester is added in a quantity such that the reaction mixture produced thereby consists of one phase. A high reaction rate can thereby be maintained in the process from the beginning.
